

Waypoint

Product & design specification

A freemium, AI-assisted productivity and goal tracker for iOS. This document is self-contained build context: problem, features, pricing, workflow, architecture, and full design tokens.

Prepared for: build handoff (AI coding assistant or human developer)

Problem & core value proposition

Most task apps make the user do the planning work themselves: breaking a goal into daily steps, fitting it around a real schedule, and re-juggling when life interrupts. Waypoint removes that mental overhead. On the free tier, users get a fast, structured manual planner with a satisfying completion experience. On the paid tier, users describe a goal and their schedule, and AI builds and maintains the day-by-day plan for them.

Target platform: iOS-first (native SwiftUI).

Target users: broad by design — students, office workers, exam-takers, professionals, doctors, and anyone who wants goals and daily tasks structured without doing the planning themselves.

Feature list

Goal & planning

- Long-term goal creation (exam prep, weight loss, custom goals) with a target date
- Weekly / short-term manual task creation, with replication
- AI goal breakdown — generates daily tasks from a goal down to the target date (Paid)

Scheduling

- One-time or ad-hoc schedule entry (recurring work hours, classes, commitments)
- AI slots tasks around the existing schedule (Paid)
- Manual priority tagging, or AI auto-priority assignment (Paid)
- Ad-hoc task handling: prompts the user to bump a lower-priority task when a new task collides with the day; user chooses which task moves, or bumps the new task instead. AI-suggested best swap is a Paid enhancement on top of this free flow
- In-progress state: a task visually shows as in-progress when the current time falls inside its planned window
- Reopen a completed task at any time (Free)
- Completion mode setting: mark tasks done manually, or auto-mark done once the planned time window passes, with manual override always available (Free)
- Time shown on every task, not just high-priority ones
- Fixed schedule blocks (class, meeting, shift) appear inline with tasks in the day view, and are collapsible — the day view doubles as a planner and an at-a-glance reminder

Focus tools

- Pomodoro timer with user-defined intervals

Progress & motivation

- Completion animations at task / day / week / month / goal level (spring/bounce physics, not linear)

- Gamified progress ring with percentage, plus a distinct visual moment near 100% completion
- Progress analytics: completion trends, streaks, best time-of-day insights (Paid)

Personalization & notes

- Light / dark mode toggle and a curated accent-color picker (Free)
- Per-task notes — text now; images and AI-generated summaries are planned for a future version (Paid)
- Push notifications: task reminders, day summary, streak nudges

Free vs. paid split

High-level gating only — no price points or tier math here by design.

Feature	Free	Paid
Manual daily / weekly task creation	Yes	Yes
Task replication	Yes	Yes
Manual goal creation + manual breakdown	Yes	Yes
Manual priority tagging	Yes	Yes
Ad-hoc bump flow (manual choice)	Yes	Yes
Pomodoro (custom intervals)	Yes	Yes
Progress bars / rings + animations	Yes	Yes
Notifications	Yes	Yes
Reopen completed tasks	Yes	Yes
Auto-complete-by-time setting	Yes	Yes
Inline collapsible schedule blocks	Yes	Yes
Light / dark mode + custom accent color	Yes	Yes
AI goal breakdown (goal to full task plan)	No	Yes
AI schedule-aware daily planning	No	Yes
AI auto-priority assignment	No	Yes
AI-suggested adhoc swaps (smart pick)	No	Yes
Task notes	No	Yes
Advanced progress analytics / trends	No	Yes

Core workflow

- 1 Onboard, then optionally enter a recurring schedule (work hours, classes, shifts).
- 2 Create a goal (long-term) or go straight to daily / weekly tasks (short-term).
- 3 Free path: manually break the goal into tasks and tag priority. Paid path: describe the goal and rough daily intent; AI generates the day-by-day task plan, slotted around the schedule.
- 4 Each day, tasks are shown ordered by priority; high priority gets a protected, uninterrupted block.
- 5 An ad-hoc task appears: the app prompts a bump — user picks which existing task to displace, or bumps the new task instead.
- 6 Completing a task fires a completion animation that rolls up into day / week / month / goal progress.
- 7 Pomodoro is available at any time for a focus session on the active task.
- 8 Notifications nudge reminders and summarize progress.

Architecture & tech stack

Client — SwiftUI (iOS-first). Local persistence via Core Data, synced through CloudKit.

Backend — Node.js / Express (or Firebase Functions) for auth, task sync, and scheduling logic.

AI layer — Claude API. Two logical endpoints: goal-to-task breakdown, and daily schedule-fitting. Called only for premium users; this is the primary Paid-tier cost center.

Calendar / schedule input — EventKit integration (optional) plus manual schedule entry.

Notifications — Apple Push Notification service (APNs).

Auth & storage — Firebase Auth or Supabase for identity; Postgres for task and goal data.

Payments — StoreKit for the iOS in-app subscription gate.

Design direction

Overall feel: minimalist and structured, closer to premium iOS apps (Things 3, Fantastical) than flat Material Design. Restraint over decoration.

Header

One UI-inspired: a large, left-aligned app title owns real vertical space at the top of the screen rather than a slim nav bar. The screen breathes before content starts. Theme toggle and accent-color swatches live in this same header area.

Cards

Rounded corners (18px), soft drop shadow for depth (never a hard border-only look), generous internal padding. Color is used as an accent or tint, never as a flat full-saturation block (that reads as Android/Material, which this app should not).

Three-state task color system

Every task card is in exactly one of three states, and the state is always readable from color alone at a glance:

- **Finished** — visible green tint background + solid green checkmark bubble icon. The stronger, more saturated green is intentional: it is meant to psychologically reward completion ("more green = more done").
- **In progress** — visible blue tint background, blue outline ring in place of the checkbox, and a small "In progress" badge. Auto-applied when the current time falls inside the task's planned window.
- **Pending / not yet done** — neutral surface color, outline circle, no tint.
- **Fixed schedule blocks** (not user tasks) stay neutral regardless of time, so they never get confused with the three task states.

Implementation note: all state colors must be pulled from theme role tokens (success / accent), never hardcoded hex, so they invert correctly and automatically when the user switches dark mode. See the Design tokens section for exact values.

Personalization

Light / dark mode toggle and a small set of curated accent-color swatches (not a full color picker) are available to every user, free or paid.

Reference: the "Today" home screen showing all three task states at once.

Design tokens

Exact values so a builder does not have to guess. All colors are theme roles — light and dark values are two expressions of the same semantic token, not separate palettes.

Color tokens

Token	Light	Dark	Usage
surface-0 (page bg)	#F5F5F3	#1C1C1A	Screen background
surface-1 (card)	#FFFFFF	#242422	Card / row background
text-primary	#2C2C2A	#F1EFE8	Titles, primary labels
text-secondary	#5F5E5A	#B4B2A9	Supporting text, meta
text-muted	#888780	#888780	Placeholders, timestamps
border	#E5E3DB	#3A3A37	Hairline dividers
fill-success	#639922	#639922	Finished-task bubble, ring fill
text-success	#3B6D11 / #27500A	#C0DD97	Finished-task text
bg-success tint	mix(fill-success 24%, surface-1)	same formula, dark surface-1	Finished-task card bg
fill-accent	#378ADD	#85B7EB	In-progress ring, icon color
text-accent	#185FA5 / #042C53	#B5D4F4 / #E6F1FB	In-progress text
bg-accent tint	mix(fill-accent 24%, surface-1)	same formula, dark surface-1	In-progress card bg
Accent swatch options	#3B6D11 (default), #378ADD, #D85A30, #D4537E	same set	User-selectable accent

Typography scale

Style	Size / weight	Usage
App title	28-30px / 500, tight letter-spacing (-0.5px)	Header wordmark ("Waypoint")
Screen title	22-24px / 500	"Today", "Settings", "New goal", etc.
Card title	14-14.5px / 500	Task name, list-row title
Body / meta	12-13px / 400	Times, subtitles, secondary detail
Micro / label	11px / 400	Badges ("In progress", "Pro"), tab labels
Big stat	18-20px / 500	Metric card numbers (streaks, counts)

Spacing, radius & elevation

- Card corner radius: 18px. App icon frame: iOS squircle, ~22% corner radius.
- Standard card padding: 12-16px. Gap between stacked cards: 8-10px.
- Card shadow: soft, low-opacity (approx. 0 1px 3-4px rgba(0,0,0,0.05-0.08)) — never a hard flat border alone.
- Icons: outline-style, 16-20px inline, 24px max for decorative use.
- Progress ring stroke width: 4-10px depending on ring size (small inline ring vs. large goal-detail ring).

Logo

Bullseye target (2 concentric rings, stroke color text-primary / #242422) with a solid accent-green center dot (#639922), and a mirror-symmetric "W" monogram growing rightward from the exact center point of the target. W stroke: rounded caps, softened internal joints, stroke width proportional to ring stroke width (roughly 1.6x). White background, no colored icon backplate.

Motion & animation

- Completion animations use spring/bounce easing, never linear — should feel physical.
- Progress rings fill with an eased sweep, not an instant jump.
- Near 100% completion, add a distinct "final push" visual moment (e.g. a brief scale-pulse or particle flourish) on the ring to reward finishing rather than treating the last percent like any other.
- Applies at every rollup level: task, day, week, month, goal.

Screens

13 screens define the v1 build, each shown here in both light and dark mode using the exact tokens above.

1. Welcome / sign-in

Centered logo, tagline, "Continue with Apple" primary button, "Continue with email" secondary.

2. Schedule setup

List of recurring commitments (work, gym, etc.) as rows with icon, name, and time range; dashed "Add a commitment" row at the end.

3. Today (home)

Spacious header with app name + theme/accent controls, goal progress card with ring, then the day's tasks and fixed schedule blocks interleaved, colored by the three-state system.

4. Week view

7-day date strip at top (today highlighted in accent color), list of per-day summary cards below ("3 of 5 tasks done").

5. Goal creation

Goal name field, target date field, then a choice between "AI-planned" (Paid, badge shown) and "I'll plan it myself" (Free).

New goal

What are you working toward?

e.g. Pass the CFA exam

Target date - Oct 12

How should the plan be built?

★ AI-planned

Describe your routine, AI builds daily tasks

Pro

✍ I'll plan it myself

New goal

Pro

✍ I'll plan it myself

6. Goal detail

Large progress ring, day-count subtitle, two stat cards (tasks done, day streak), and an "Upcoming" list of the next tasks toward the goal.

7. New task / task detail

Name field, time + duration fields, priority selector (High / Medium / Low), and an "Add notes" row with a Pro badge.

New task

Task name

9:00 AM

60 min

Priority

High

Medium

Low

Add notes

Pro

Pro

8. Ad-hoc bump flow

Modal card: alert icon + explanation, radio list of existing tasks to bump, primary "Bump selected task" button, and a secondary option to bump the new task instead.

9. Pomodoro

Large countdown ring in the accent color, interval selector chips (25 / 30 / 45 min), and a play/pause control.

10. Completion celebration

Full-screen moment: large checkmark bubble, "Day complete" headline, streak subtitle, and a before/after goal-progress readout. This is the animation's end state; the transition itself should use spring easing per the Motion section.

11. Progress / analytics (Paid)

Bar chart of the last 4 weeks' completion, two stat cards (avg completion %, best streak), and a plain-language insight card.

12. Settings

Appearance row (light/dark), accent-color swatches, task-completion mode row, notifications toggle, and "Manage subscription" link.

13. Paywall

Icon, "Waypoint Pro" headline, tagline, a checklist of the four core Paid features, "Start free trial" primary button, "Continue with free plan" text link.

Future scope (not in v1)

- Task notes: add image attachments alongside text.
- AI summarization of task notes.
- Android build, once the iOS experience and design system are proven out.

Everything discussed during design review that is not written into this document does not count as part of the spec — this PDF is the deliverable of record.
